□ Manufacturers

- Provide an abstract specification
- With **abstract test-cases**

□ Sub-contractors

- Responsible for development
- Refine and implement the specification

**How to use abstract test-cases
in a concrete context?**

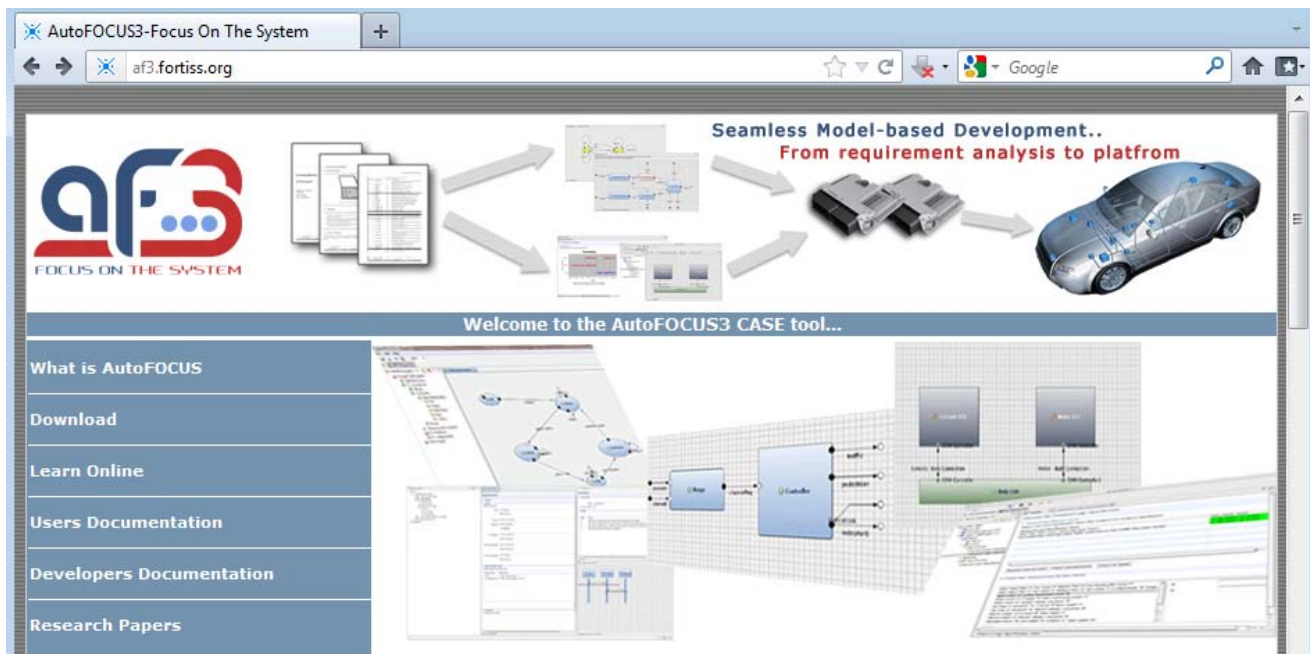

□ AutoFocus

- Seamless model-based development tool
- Using stream processing function concept
- Binding formal techniques together
 - » Modular Component
 - » State machines
 - » Mode automaton
 - » Temporal logics
 - » Requirements analysis
 - » Test suite generation
 - »

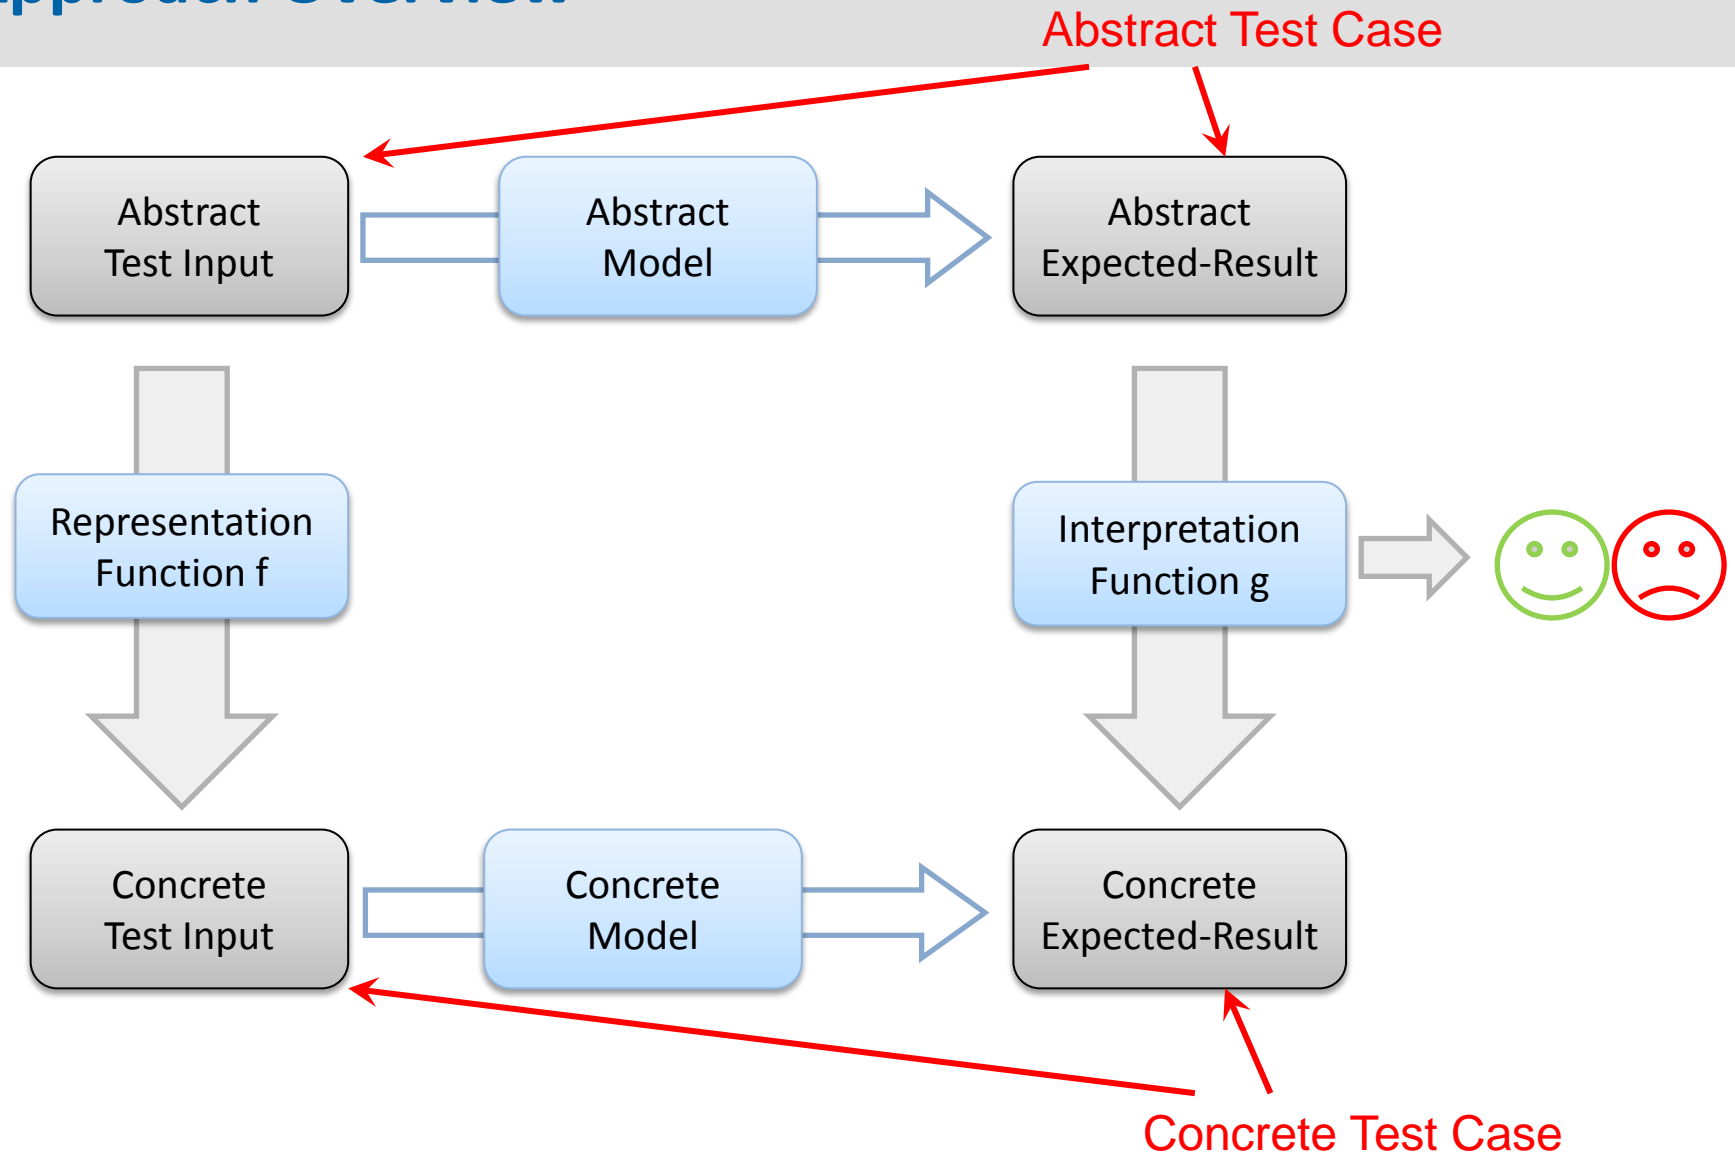

AutoFocus 3

□ Web Site

- <http://af3.fortiss.org>
- Current Version: AutoFocus Phoenix 2.1-RC2 (15.03.2012)

Approach Overview

Differences from Abstract to Concrete Model

□ Reduced behavior space

- Abstract model contains more execution paths
- Concrete model may only support a subset of all paths

□ Increased complexity

- Abstract state is normally very simple
 - » Boolean value, Abstract token, ...
- Concrete state is much more complex
 - » 32bit integer, list type, ...

Abstract Model

- Focus on limited logical behavior
- No implementation details

- Advantages
 - Easy to model
 - Easy to validate
 - Easy to understand

Abstract
Model

Example – Abstract Model

□ Text Requirement

- *Braking by the driver shall deactivate the ACC function at least if the driver initiated brake force demand is higher than the ACC initiated brake force. (ISO 15622)*

Example – Abstract Model (Cont.)

□ Formal Requirement

$\text{UserBrake} > \text{AccBrake} \rightarrow \text{State} = \text{ACC_Standby}$

$\text{UserBrake} \leq \text{AccBrake} \rightarrow \text{State} = *$

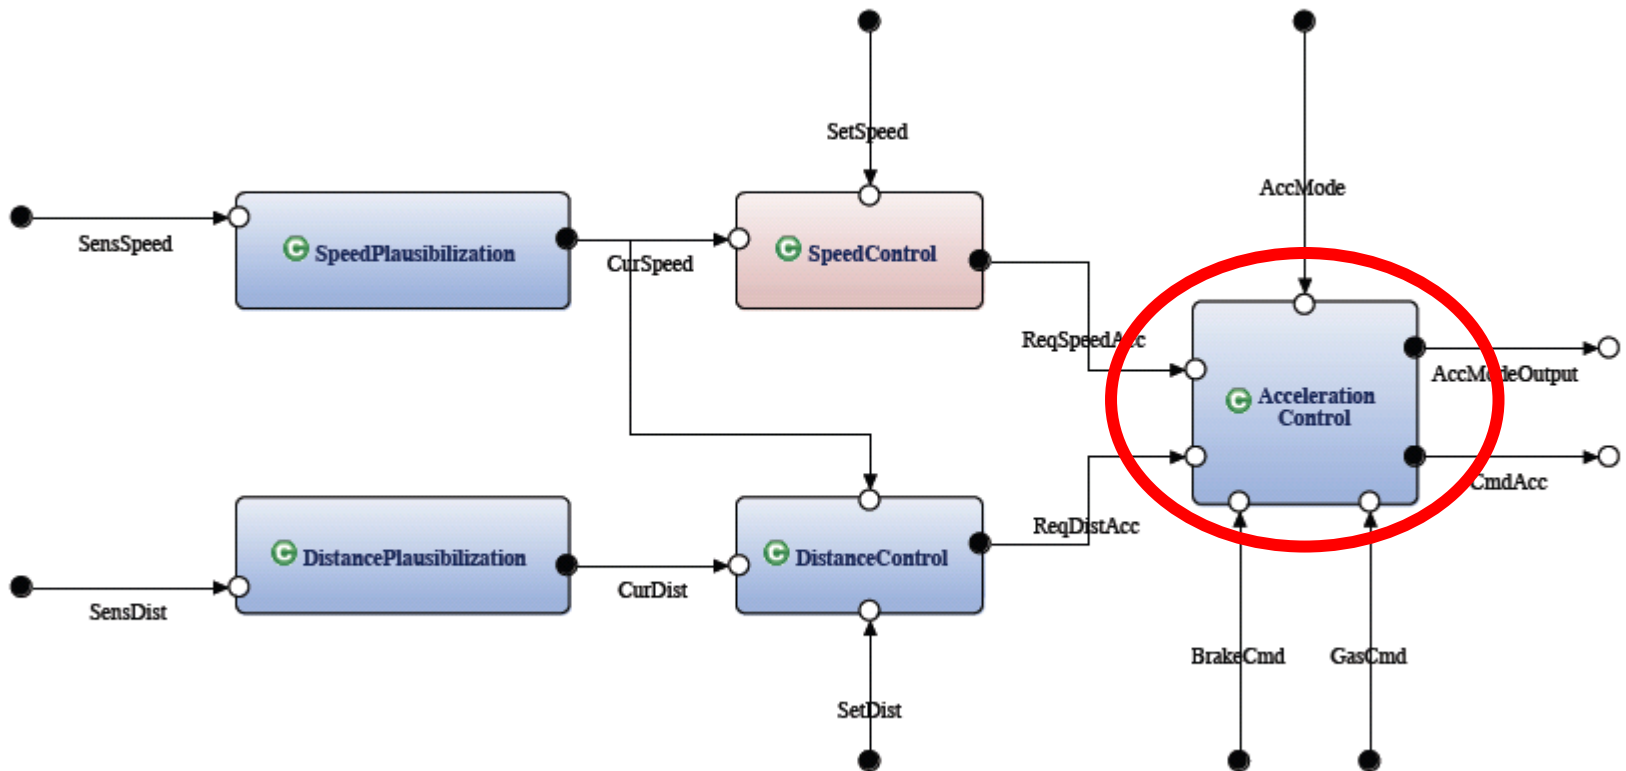

□ Implementation

- Refines the specification
- Under multiple constraints
- Adds substantial complexity

Concrete
Model

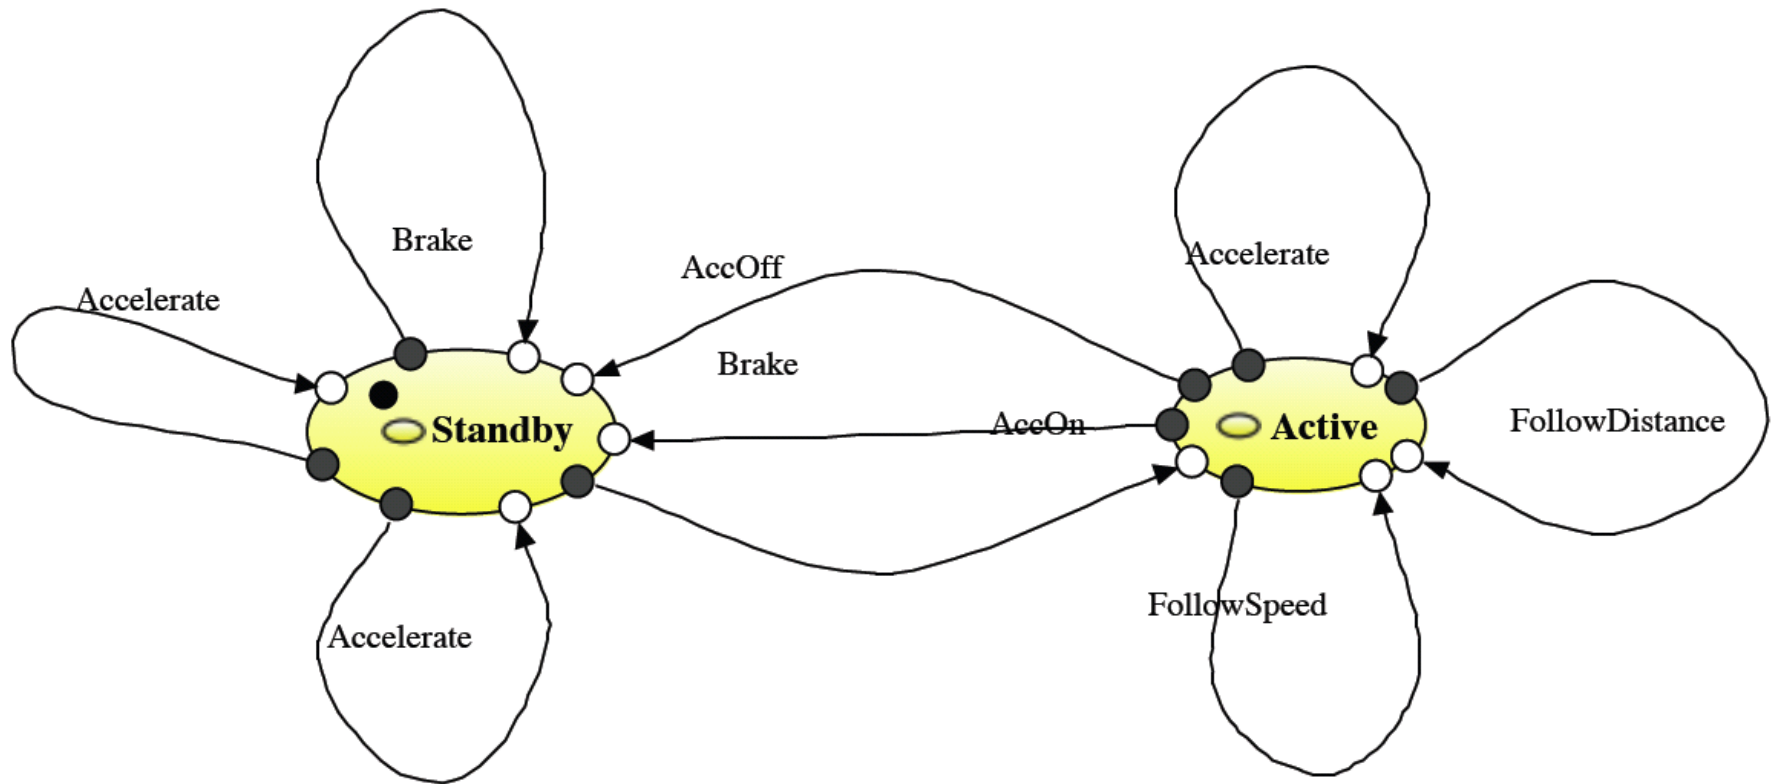

Example – Concrete Model

□ ACC System Model

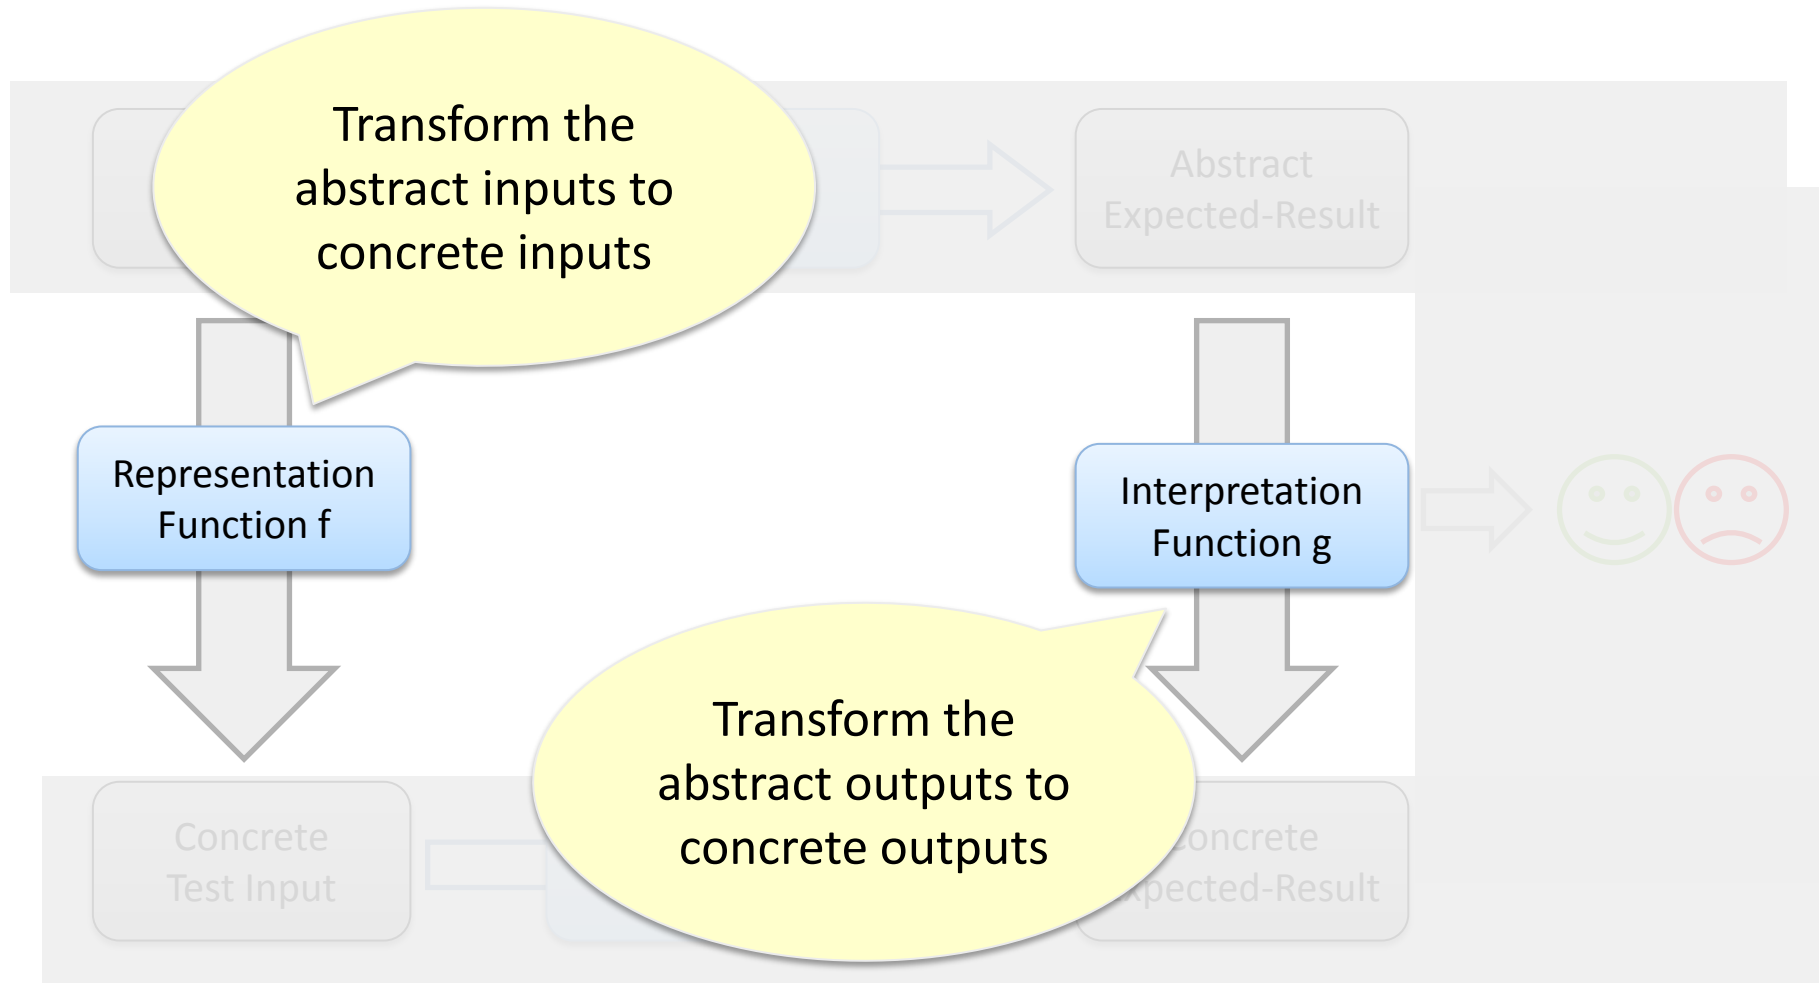

Example – Concrete Model (2)

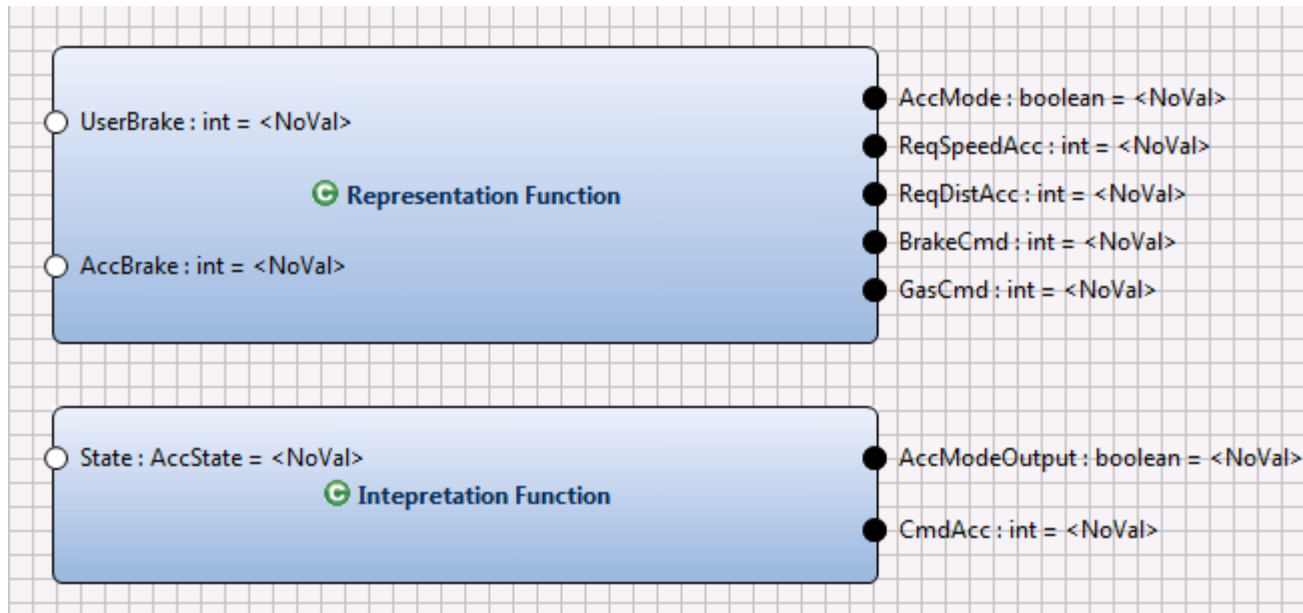

□ State Automaton for Acceleration Control

Refinement Functions

Example - Refinement Functions

Example - Results

□ Expected Results

- Combined view of abstract and concrete test data

	UserBrake?	AccBrake?	State!	AccMode?	ReqSpee...	ReqDistA...	GasCmd?	BrakeCmd?	AccMode...	CmdAcc!

Test Case 12										
Test Case 13										
Test Case 14										

Abstract

Concrete

Conclusion

- Proposed and implemented a method
 - To reuse test cases cross abstract and concrete domains
 - Part of a solution to support development with a manufacturer/sub-contractor relation

Future Work

- Automatic test suite generation for formal requirements
- Improvement of refinement functions for expressing of timing constraints and macro behaviors

Thank You
